TALLERSÀNGELSALA

COMPANY

Completely automated turning prepared for production in medium/large series, from 30.000 to 300.000 pieces per year in dimensions of Ø 50 to Ø 300 mm, horizontal and vertical centres with double pallet from 500 x 350 x 400 to 850 x 700 x 750 with storage from 16 to 60 tools.

We also have auxiliary machinery such as broaching, honing and balancing machines and we also offer the cleaning and marking of pieces.

TAS, S.A. is a company dedicated the machining of pieces by chip cutting through machine tooling. Our experience enables us to develop the tools and processes required for ensuring we obtain a product of maximum quality, at the best price and in a short period of time. We provide our clients with the finished product according to drawing, being responsible for the commercial and technical management of the raw materials and later surface finish stages.

QUALITY

The quality and production departments jointly organise all documentation necessary for the industrialisation of the product (FMEA, Control Plan, R&R, APQP and control plan, etc.). The quality department has the metrology and facilities required for the dimensional control of the product, such as contour follower, surface profile gauge, durometer, three-dimensional machines, templates, callipers, etc.

The operatives are skilled and trained to make the controls according to guidelines, including verification with the three-dimensional machines.

PRODUCT

We possess a large plant of latest generation machinery that we constantly renew in order to respond to the continuous demands of the market. The usual materials are all types of steel, grey and nodular cast iron, aluminium, etc.
