R&D Center

A global reach

Anfarm has achieved a global reach for its products through licensing, exports and 3rd party manufacturing to numerous countries in Europe, Canada, and Africa as well as in emerging generic markets such as the MENA, LATAM & APAC regions.

Anfarm's state of the art manufacturing facilities coupled with an exceptional team of R&D scientists provide the assurance of a smooth transition from lab to commercial scale, as well as in-depth scientific know-how for tech-transfers.

At a glance:

50 years of experience

20M Iyo vials per year

8M β-lactam vials per year

72 Molecules developed & counting

Our main activities include:

- OUT LICENSING
- EXPORTS
- NEW PRODUCT DEVELOPMENT
- TECHNOLOGY TRANSFER
- THIRD PARTY MANUFACTURING

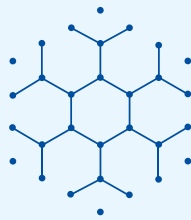

The R&D Center acts as a development center for new generics both for Anfarm and third parties, acting as a CDMO. Both development and transfer activities are performed through the collaboration of the formulation and analytical development sub-units and aim at preparing the contents of the technical dossiers for filing through DCP and/or national registration procedures.

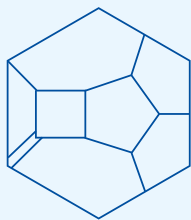

The R&D Center's main function is the development and transfer of third party sterile (freeze dried, liquid and powders for infusion) and non sterile products (tablets, oral solutions), based on existing R&D equipment including R&D scale freeze dried apparatus, LC (HPLC and UPLC) and GC analytical equipment.
