

Company and brand introduction

Uartkorea Co., Ltd.

About the Company

“We will put our unsparing efforts into becoming a reliable cosmetics brand that uses only mild ingredients.”

Uartkorea Co., Ltd. is a cosmetics manufacturing company established in December 2019. Our flagship products include the "Resvera Line" functional cosmetics (serum, cream), which use "K-OL" (developed by the Rural Development Administration) as the main ingredient—a specially cultivated peanut variety rich in the antioxidant resveratrol.

Additionally, we offer the "Moisterr Line", a collection of four refreshing and deeply hydrating products (hand lotion, serum mist, tone-up cream, and body wash), formulated with Vegetal PCY220, an exclusive ingredient developed by our company using Chionanthus retusus flowers and plum extracts. For body care, we present the "Moisterr Body Care Line", featuring two unique products (body cleanser and body lotion) infused with Vegetal PCF300, which delivers an exceptional fragrance derived from plum tree flowers and Chionanthus retusus flowers. Another standout is the "ForestWorks Line", which includes a dual-layer body wash known for its outstanding moisturizing properties. For facial skincare, we have launched the "Moisterr Basic Care Line", a collection of four gentle and eco-friendly products (toner, emulsion, gel cream, and cleansing foam), carefully designed to meet diverse skincare needs.

All our products undergo dermatological testing and have been certified non-irritating (ZERO irritation score), ensuring maximum skin safety.

Uartkorea is committed to delivering premium skincare with the highest quality, using carefully selected ingredients and a strong emphasis on safety.

< Intellectual property rights ownership and certification >

-5 patent registrations, 5 patent applications, and 1 trademark registration, 4 trademark application

-2 ISO certifications (9001/45001), ownership maintained

Completed the Master's course in dermatology and published a paper titled "A study on the anti-aging effects of cosmetics with the resveratrol ingredient included in sprout peanut extract"

Extensive lecturing experience, licensed as a national skin care specialist

Won the National Assembly Member Yun Yeongseok's Award

Won the Gyeongsangnamdo Governor's Award

Won the SMEs and Startups Administrator's Award

Won many other awards

Brand RHea

RHea is the premium skincare brand named after Rhea, the goddess of earth and abundance in Greek mythology, conceived from the meaning of "cosmetics made from raw materials pulled from the ground."

RHea began when the founder, a 26-year cosmetics expert and master of dermatology, consulted numerous women's skin concerns, listened to their stories, and developed her own cosmetics. Instead of chemical-rich cosmetics, the founder began looking for answers in nature, and after numerous studies, he discovered the excellent moisturizing power and skin-soothing effects of peanut oil. In particular, she confirmed the excellent efficacy of K-OL peanut oil, a rare variety, and established RHea by using it as a key ingredient.

Key ingredient for UartKorea

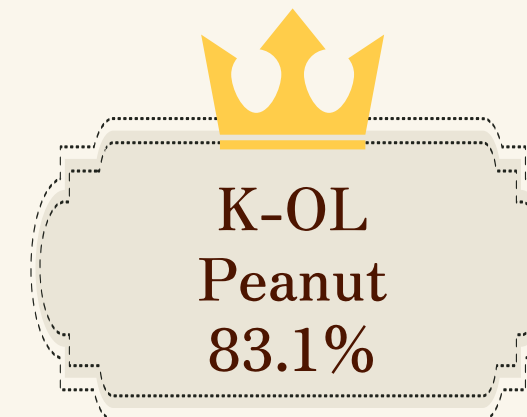

Rural Development Administration's patented variety "K-OL Peanut"

K-OL Peanuts are a world-class premium rare peanut variety created after 10 years of study by Dr. Bae Seokbok of the Rural Development Administration. K from K-OL Peanut stands for Korea, and OL for oleic acid as they have a very high oleic acid content. Further, K-OL Peanuts, with a high content of "resveratrol", a type of polyphenol and powerful antioxidant ingredient, make cells strong with an outstanding anti-aging effect. Our company studies, develops and manufactures functional cosmetics with K-OL Peanut oil as a key ingredient.

Comparison of oleic acid contents

The K-OL Peanut contains 83.1% oleic acid, about 8% higher concentration than olive oil.

Oleic acid, a premium unsaturated fatty acid, is also called Omega-9.

New ingredients developed by UART-K development !

Vegetal PCY220

(P: Plum C: Chionanthus retusus flower Y:Yangsang City 220 Lab Test)

Vegetal PCY220, a new ingredient developed in-house, is made from Prunus Mume Fruit Extract extracted from plums, a specialty of Yangsan city, S. Korea, and extracts from flowers of Chionanthus retusus, a symbolic tree.

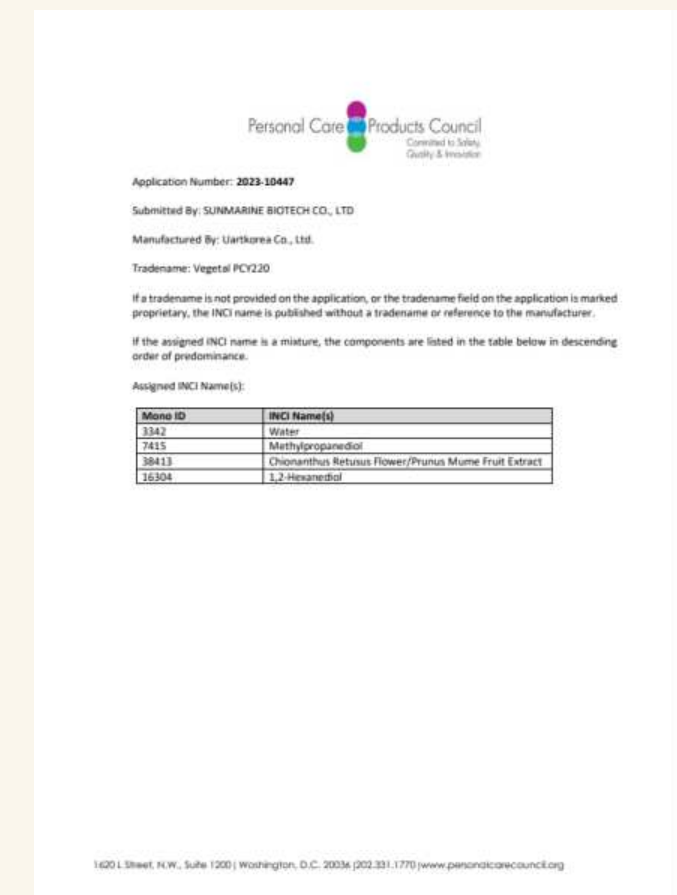

Features of Vegetal PCY220

- Chionanthus retusus flower extract helps maintain homeostasis and clear skin
- Improves skin health with the moisturizing film of Prunus Mume Fruit Extract
- Boosts moisturizing, resilience, and wrinkle reduction
