ACNE EXIT FOAM CLEANSING

Instructions for use

1. First, wash your hands thoroughly and wash your face with water two or three times.
2. Squeeze a face wash (0.5g) on wet palms and apply over the entire face. Rub evenly for a long time on acne-prone cheeks, chin, forehead, etc.
3. Rub it like a massage and if it dries, wet your hands and reapply Repeat the long rub.
(The more iterations, the better the effect.)
4. Rub the acne-prone areas for a special long time.
(at least 100 times) Finally, rinse thoroughly with water.

Sebum/pores/keratin

TRIPLE CARE

- ✓ If you work hard to clean your pores, your pores will get bigger.
- ✓ If you only care for dead skin cells, your skin will become sensitive.
- ✓ If you only take care of your sebum, your skin will become dry.

Now it's time to improve all three at the same time!

01 The main cause of skin stress improvement of sebum secretion

The spicule component contained in the exit Controls excess sebum.

02 Skin that breathes every day

No extra keratin care, just washing your face Provides light skin all day long.

03 Deeply entrenched clean into the pores

Eye-catching pore care with just one use!
It cleans pores every day.

ACNE EXIT

KCI Clinical Paper Results

(Asian J Beauty Cosmetol 2019; 17(3): 397-410)

After having 14 test participants use the product, The improvement effect was proven through the Korean-type acne severity system and survey.

10's

Figure 1. Clinical weekly differential skin rating changes (CASE 1).

Prior to treatment acne severity rating was classified as grade 6 according to the Korean Acne Rating System. Acne had improved steadily starting at 5 weeks, reaching grade 4 at 9 weeks and grade 3 at 12 weeks.

20's

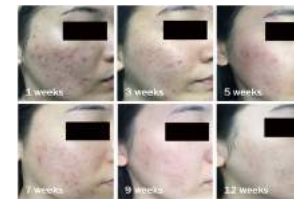

Figure 2. Clinical weekly differential skin rating changes (CASE 2).

Prior to treatment acne severity rating was classified as grade 4 according to the Korean Acne Rating System. The number of papules started decreasing at 3 weeks. A temporary skin complication after 9 weeks was observed, but it returned to normal at week 12.

40's

Figure 5. Clinical weekly differential skin rating changes (CASE 5).

Prior to treatment acne severity rating was classified as grade 3 according to the Korean Acne Rating System. After 7 weeks, the pitted scar and hypertrophic scar were reduced and after 12 weeks, the size of pores, papules, and nodules were improved.

Synthesis

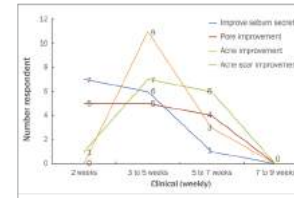

Figure 6. Weekly efficacy analysis.

Multiple responses to clinical outcomes indicate improve pores improvement and improvement in sebum in two weeks. Acne and acne scars improved after 3 weeks and the severity of the acne lesions was significantly lower.
