

Oii<sup>®</sup> *Baby Bottle*

The way of thinking to build sympathy  
between baby and mother

Daymoon<sup>®</sup>

For whom was an existing baby bottle made?  
Of course it would be a product for babies.

So who is using the baby bottle for the longest?  
It is our mothers who sacrifice anything for their baby.

So DAYMOON decided to look again at the user's point of view to make a good product. Our goal was to develop a baby bottle made by observing mothers' behavior patterns as a second user as well as a baby.

Breastfeeding products are not only products for babies but also products for mothers.

We will make good products with careful change.

Team **Daymoon<sup>®</sup>**

**ou** *Baby Bottle*

**“The way of thinking to build sympathy  
between baby and mother.”**

The life cycle of a baby bottle  
will normally only last from 3 to 4 months  
and be thrown away.

Whereas OU baby bottle is  
a sustainable design product  
in order to broaden its another utilization for mother.

# “Versatile and sustainable baby bottle”

OU baby bottle  
with high quality environment materials  
can be used as a baby food container or a water bottle  
for going out during breast-feeding,  
  
but after the breast-feeding  
it can be also used as  
a luxurious kitchenware.

Daymoon®

“Even after the breast-feeding,  
it can be used semipermanently  
as a kitchen container.”

"Improve its storage  
by sealing with a silicon ring."

Daymon®

Simple yet luxurious,

OU baby bottle is  
a product for babies as well as a kitchenware  
considering the way of their grips.

Unlike the existing products,  
OU baby bottle  
with completely transparent material  
is able to  
help easily checking foreign substance  
when washing and measuring its contents.

DAYMOON has released  
OU baby bottle with high quality environment material (PA)  
including the benefits of glass and plastic :  
transparency, weight, solidity and harmlessness to the body.

The rounded bottom part  
is designed to prevent from foreign substance  
and be easy to put away  
as a kitchen container.

Air valve of nipple system  
can help reducing effectively  
baby's stomachache and vomit.

We also provide a convenience function  
called 'tap handle' for mother's usability.

The inside of the nipple  
is designed  
for helping the flow of milk.

Ergonomic design  
for the gesture of the baby  
when nursing and the baby's mouth.

Each baby has their own choice of nipples.  
DAYMOON sincerely understands their choice.  
Don't worry! OU baby bottle is able to compatible with other different nipples.

Hot water disinfection

microwave

baby bottle sterilizer

dishwasher

All are washable.

"OU baby bottle  
with heat resisting material (PA)  
is  
able to sterilize steam sterilization,  
and have highly resistance  
to chemical detergent.

"The materials in all parts of OU baby bottle  
are considered the safety  
for babies and convenience of mothers.

- **Silicon**

Silicon is used as a variety of baby products and kitchenware because it is flexible without causing chemical reaction. Silicon is a safe material that does not detect bisphenol-A or toxicity.

- **PP(Polypropylene)**

Polypropylene is a material that can be relieved from environmental hormones even when sterilized by microwave oven or hot water disinfection, and is also easy to handle with a soft, shock-resistant and unbreakable property.

- **PA(Polyamide)**

Polyamide, developed in Switzerland, is an eco-friendly material that has passed European safety inspection standards and has been recognized for safety, and is a material that does not emit any environmental hormones.

DAYMOON PA(polyamid),  
selected a material to OU baby bottle,

had been developed  
for a medical product  
in Switzerland  
which obtained safety certification.

DAYMOON  
can make sure that OU bottle is  
a bisphenol-free (BPA, BPS free) product  
for safe not including environment hormone.
