uruk ••

Your online signature platform

Digitize your business

Get your documents and projects digitally signed with legally binding signatures, by whomever you want and from wherever you want, and forget about physical signatures.

Uruk is an online platform that meets your signing needs in all professional environments. Electronic certification, timestamping, blockchain, biometrics.

Select the signing sequence that's best suited to your needs in every case, so your company never needs to go back to physical signatures.

Designed for all users

Sign documents
Load the documents to be signed and select the signing sequence that you need.

Document manager
Manage, load and edit documents for e-signatures.

Cloud-based
Load the required documents to be signed and select the signing sequence you need.

API
Integrate our signature service into your system through our API.

Customizable
Easily add your corporate logo or image.

Notifications
Access and send notifications from any place and device. OTP SMS

It doesn't matter how big or how digital your company is.

Our services are adaptable to your needs so you can have your workspace in the cloud to manage all your documents or you can integrate it easily into your system with our API.
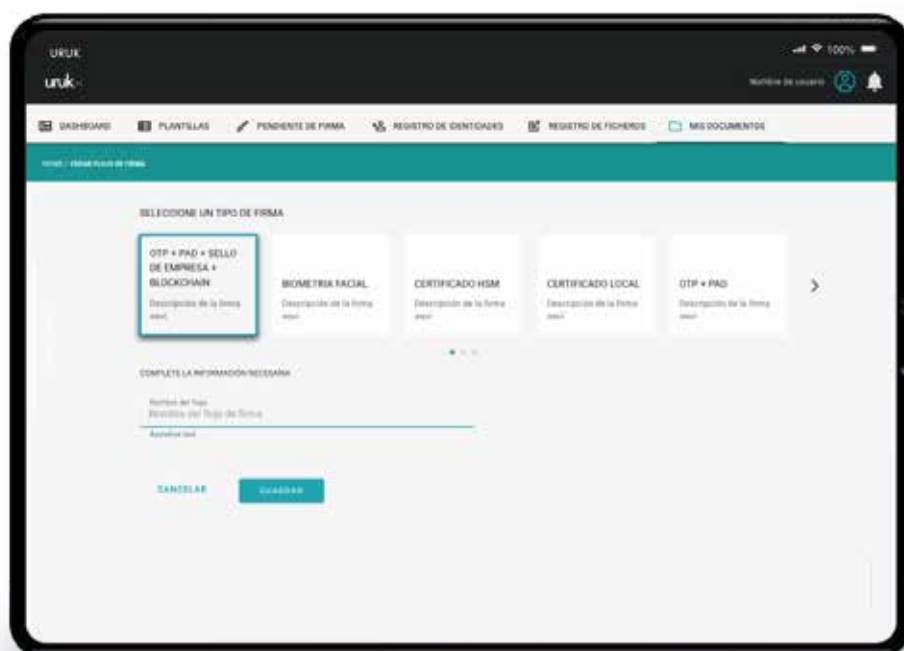

Connect&Manage

Easy access to all your documents in the cloud from any location, and in readiness to be signed.

Work with documents that can be configured by the client in order to create and personalise document templates by means of forms, and preview them with an intuitive and simple interface.

Load, edit, modify and save any document for signing: contracts, records, certificates, etc. in different formats: Word, pdf.

**Easy
Quick
Safe**

Legally binding signatures by whomever you want, from wherever you want.

Connect&Sign

A module that lets you digitally sign documents in the simplest way possible. Send your documents so clients or third parties can also sign them digitally. Manage signatures as you want, not just your own, but also those of third parties.

Personalise the signing sequence of each document according to your needs and the possibilities of your clients.

Back up the issued services: store a copy of every digital signature generated.

Signature Types

Advanced timestamped signing with electronic certification in the cloud
Qualified electronic signature
Mail OTP Signing
SMS OTP Signing
Handwritten and Facial biometric signature
Blockchain signature
Registering documents with Blockchain

Products

QUALIF_ID
Q-Id is the fusion of **Blockchain for Digital Identity and Electronic Signatures**, thus merging the traceability and immutability of Blockchain with the legal recognition of the e-signature.

Cloud-based certification
Quickly and easily sign your documents from any device and any location, thanks to our cloud-based signing service.

Timestamping
Checks the integrity of a series of data from a concrete instance and provides proof of the existence of these data at a certain moment in time and their unaltered nature.

Advanced electronic signature
Lets you sign electronic documents of all types, ensures identity verification, and the integrity of the signed data. Admissible in court proceedings.

SMS and e-mail
Gestiona las notificaciones de firma mediante SMS y e-Mail.

Handwritten and facial biometric signature
Handwritten signatures made on a touch-sensitive portable device that captures your signature and prints it in the document.
Facial biometric signatures are created by means of a video identification system that verifies the client's identity with facial recognition technology.

Sign and register records in Blockchain
Sign and register any digital file and safeguard its contents with Blockchain technology.
