Optimization of staff and wood resources
Optimization of staff and wood resources

Customized system solutions

Customized system solutions
System TM is the leading manufacturer globally of customized system solutions for the solid wood industry, and has more than 35 years’ experience.

We are experts in combining different main machines with material handling, giving our customers highly integrated and fully optimized lines with regards to capacity, yield and staff resources. The success of our business is based on our understanding of the customer’s needs, while creative use of knowledge and technology forms the foundation of our core competencies.

Opti-Solutions are characterized by:
- One total supplier
- Individually designed and manufactured with regards to capacities, processes and layout
- 100% workpiece control throughout the line
- Complete hard- and software integration between all functions of the line
- Low labor costs and optimal line utilization
- Higher efficiency of all main machines
- Project management

Additional products

Opti-Solutions
- Door manufacturer
- Building components manufacturer
- Flooring manufacturer
- Moulding & millwork manufacturer
- Pallet manufacturer
- Moulding & millwork manufacturer
- Furniture manufacturer

System TM service

- Make a wise move
  - let an Opti-Solution increase your production capacity and reduce your labor cost!!

System TM as your total supplier

When choosing System TM as your total supplier you will benefit from the vast experience of our entire team. System TM takes full responsibility for the entire process, and will be your only supplier when you invest in a single system or an entire system solution.

The competencies of System TM covers everything from line design, installation, commissioning and staff training to service and maintenance - all to make your production as efficient as possible. With our technical expertise and experience, we can advise you on all technical aspects and we offer the best support and advice in the industry.

The project process

Through the entire project process, our highly specialized team is dedicated to each project and the customer will be met with the best competencies and qualifications in every stage of the process – guaranteeing 100% customer satisfaction.

The project process consists of:
- Sales process
- Project management
  - Line design
  - Manufacturing
  - In-house test
  - Installation
  - Commissioning
- Service and maintenance
This Opti-Solution is an optimizing cross-cut line consisting of an Opti-Feed 6000 automatic feeding system that destacks, separates and turns the workpieces before a rip saw.

The rip saw splits the workpieces before a moulder that calibrates the top and bottom surface for an optimal scanning detection.

Two Opti-Kap 5003 cross-cut saws cuts the wood according to the scanning result for the best wood utilization. After cross-cutting the workpieces are sorted for finger joint or fixed lengths components. All workpieces are stacked by four automated Opti-Stack 3000 stacking machines.
This Opti-Solution is a material handling system that consists of four feeding systems, model Opti-Feed 6000, feeding four different qualities to two high frequency laminating presses.

After laminating, the beams are separated in a buffer system and automatically transported to two grading and repair stations. If needed, the beams are repaired manually by two operators. After the grading and repair stations the beams are transported through a multi head cross-cut saw, model MK2 where the ends are trimmed before moulding.

After the moulder the beams are once again quality checked and repaired if needed, then labelled and transported to the automated stacking machine, model Opti-Stack 6000.
This Opti-Solution is an optimizing cross-cut line consisting of an Opti-Feed 6000 feeding system, that feeds batches of workpieces to a planer. After the planer, the workpieces are automatically transported to a Microtec 502 scanner including x-ray, for detection of defects and quality.

Through a queue control system, the workpieces are then transported to three optimizing cross-cut saws model Opti-Kap 5003, that cuts the workpieces into flooring components. The cross-cut components are then sorted according to the correct lengths, qualities and widths.

Flooring manufacturer
This Opti-Solution is a material handling system consisting of an automatic infeed system model Opti-Feed 6000, that automatically feeds the workpieces to a bandsaw. The bandsaw splits the workpieces into two or three pieces, and the workpieces are subsequently singulated and orientated in the correct order before entering a moulder.

After the moulding process, the workpieces are transported to a double-end tenoner for end profiling, and afterwards automatically bundled in a bundling station. The bundled workpieces are immediately strapped or folioed, and then stacked into big packs by an automatic stacking machine model Opti-Stack 6000. After stacking the full pack is then folioed and strapped.
This Opti-Solution is a multi head cross-cut line consisting of an automatic infeed system model Opti-Feed 6000, that automatically feeds the workpieces to a feeding chain conveyor.

The feeding chain conveyor creates layers of the workpieces, and feed the layers into a multi head cross-cut saw model MK5, for multiple cross-cutting. The cross-cut workpieces are then transported to a continuous stacking machine model Opti-Stack 6000, also capable of placing stabilizing sticks in the packs if needed.

After stacking, the packs are automatically separated and transported to a strapping area.

**SCANNER**
Detection of defects and quality
This Opti-Solution is an optimizing cross-cut line consisting of an automatic infeed system model Opti-Feed 6000. The infeed system feeds the raw material to a moulding machine, that splits the workpieces into lamellas. After the moulder, the lamellas are automatically singulated and transported to a Microtec Goldeneye 501 scanner, for detection of defects and quality.

Through a queue control system, the workpieces are then transported to two optimizing cross-cut saws model Opti-Kap 5003, that cuts the workpieces into furniture components.

After cross-cutting, the components are sorted for either finger joint components or fixed lengths, stacked manually or automatically by four stacking machines model Opti-Stack 3000.
System TM A/S

All products and system solutions from System TM can be equipped with an automatic handling or scanning system for best lumber utilization and capacity, with a minimum use of labor power.

In order to meet all customer demands, our range of material handling systems consist of both standard solutions and fully customized system solutions.

MiCROTEC

All products and system solutions from System TM can be equipped with an automatic scanning system for best lumber utilization and production optimization.

The scanner partner of System TM is a technology leader within the scanning industry. Their scanners are extremely reliable and accurate when recognizing wood defects in order to automate, streamline and optimize your production.

The identification of the characteristics of the lumber, is based on a Multi-Sensor scanning technology that recognizes knots, cracks, pitch pockets, holes, stains, wanes and other board defects as well as their location. With unheard precision, and at a very high speed, the sensors scan the boards for the best possible lumber utilization.

A product or system solution from System TM, combined with today’s scanning technology and optimizing software, ensure the best production optimization, at an unbeatable high capacity.

Optimal performance with a strong service- and support team

System TM service is a key strategic business unit. The service department focuses on providing you with service and support and we continuously develop our services to meet your requirements.

System TM service offer you services to ensure uninterrupted operation, with the best possible productivity and utilization. Systematic maintenance minimizes production downtimes, and ensures smooth operation with minimum risk of surprises.

System TM service is a team of professionally educated, trained and experienced service engineers and technicians ready to provide full technical support and services. With more than 35 years of experience designing, building, integrating and maintaining automated wood material handling systems, System TM is highly qualified to offer total service and support.

This includes:

- Service and maintenance contracts
- Customized kit for each customer to give a successful start
- Modification, upgrading and extension of existing machines, controls and software
- Relocation, renovation, installation and start-up of machine installations
- Production and system analysis and optimization
- Staff/operator education on how to handle and maintain the machines
- Advisory and consultancy service
- Spare parts and enhancements
- Warranty
- Helpdesk and online telephone support - 24 hours worldwide
