Enterprise for human and nature

Return to Nature, Respecting man's life and dignity

Message

Constant value creation for customers
Contribution to humanity and society through the technology of realizing human happiness and dreams

Thank you for your visit to the website of Dongsuh Industry Co., Ltd.
Wood is a familiar nature resource that has been long together with human beings. These days, the eco-friendliness of material has drawn new attention.
The wood industry, which deals with sustainable resources as one of national basic industries, faces a new opportunity to grow further as the best industry for environmental protection in the environment-friendly era.
Dongsuh Industry Co., Ltd. commits itself to developing the technology of using wood in harmony with the environment in all processes of producing and using wood products and recycling waste wood materials.
With the vision of the wood industry, Dongsuh Industry Co., Ltd. will always prioritize 'Ecology' and 'Human Wellbeing' to contribute to economy, society, and the environment.

Color Organic Fertilizer Color Wood Chips

Saekdrin

1. What is Organic "Saekdrin" for landscaping developed by Dongsuh Industry Co., Ltd.?

Wood chip mulches which are covered over soil are excellent effective at keeping soil moisture, controlling earth temperature, preventing soil erosion, suppressing weeds, preventing soil borne pathogens, and preventing soil pollution.

"Saekdrin", the organic fertilizer of Dongsuh Industry Co., Ltd. was developed first in Korea for the purpose of keeping the unique function of mulches and creating beautiful living environments through various colors of wood chips.

"Saekdrin", the organic fertilizer of Dongsuh Industry Co., Ltd. does not include waste dry materials and waste wood materials like waste furniture which have a variety of toxic elements such as chlorine, arsenic, and formaldehyde. Instead, the product is developed with 100% pure wood and coloring agents safe for animals and plants. Since this eco-friendly product is developed in compliance with strict quality criteria, it can be used safely at any places.

Functional features of the product

- Control moisture evaporation to prevent withering/ Keep earth temperature in winter to reduce freezing injury
- Limit an amount of sunlight penetration to suppress germination and growth of weeds
- Reduce soil erosion, soil wind erosion, and especially hillside slides/ control soil pollution and soil borne pathogens occurrence
- Help to breed effective microorganisms in soil and limit the contact with soil to reduce fruit decay
- Protect trees and other plants for landscaping against grass elimination/ protect the tree roots exposed outside
- Reduce soil compaction caused by human and equipment
- Work as a buffer to the hard surface like concrete / Suppress soil dust scattering

Quality features of the product

- The processed product with 100% pure pine wood; no recycled wood chips
- Coloring agents safe for animals and plants/Composite organic product (Saekdrin), General color wood chips (Takkal Gowoon)
- No leach of coloring element/ 2-3 years of color safety through moisture control
- No impurities like pebbles, large wood pieces, plastic materials, and sludges
- No decayed wood and barks (less than 0.3%)

2. Product Specification

- Shape: wood chips (solid form) Tree species: Pine tree (100%) Size: 1~4cm
- Order Size & Color - support production after customer consultation
- Size: 50L/bag 1000L/Ton Bag
