

Nonghyup is the best about red ginseng.

We know what kinds of the land and the method decide the best red ginseng.

**'Protecting the health of the nation,
with one from our land.'**

**This is the fate of Nonghyup,
and the reason of Hansamin's specialty**

100% domestic investment

The owner of Nonghyup RedGinseng Hansamin is the agriculturalist of the ROK.

Nonghyup RedGinseng Hansamin was 100% self-invested by the National Federation of Agricultural Cooperatives in August 2002 for improvement in economic efficiency and the development of ginseng.

Thorough material acquisition

Only Nonghyup makes it possible from the beginning to the end

With strict production guidance in place, Sampo, upon reaching the right time for harvest, is subject to thorough quality inspections, such as residual pesticide inspections. Only then can the ginseng be distributed for purchase. The end product, which has been cultivating for 6 years, will contain well-balanced components and enriching saponin contents.

Advanced GMP Processing Facility

Red ginseng from an advanced GMP factory is different

GMP is a strict production quality management certification system that includes everything from raw material purchase, production, packaging, EX-warehouse, etc. Nonghyup red ginseng hansamin obtained the GMP certification in March 2010 after completion of the factory in September 2009. As certified members, we will protect our customers health with safer and healthier products in the future.
