

Effective in maintaining foul odor and maintaining cleanliness maintaining a pH balance of 4.0

The V zone is an extremely sensitive area in women. A healthy V zone maintains a pH at around 3.5 ~ 4.5. When other cleansers or water are used in the area, it can break the pH balanced, easing the breeding of harmful bacteria. In the case of Chungkimyungki, it was manufactured to match the pH in the zone, to maintain the acidic balance, improve immune system, building a defense mechanism and deodorizing all at the same time.

What is the patented, polygamma glutamic acid (γ-PGA)?

It is an highly effective antibacterial and antiviral ingredient on Candida (fungus) helping women alleviate their worries infected secretion.
