solution partner**

# About Us

## "Sweat blood" is our second name. We "sweat blood" for quality production.

The journey of **KISBU**, today the most favored brand in many industries ranging from furniture to home textile, from medical to hygiene, started about 40 years ago from now.

Nedim KİSBU, who founded the company in 1978 at Mercan Sales Branch, designated philosophy and future of **KISBU** giving his surname - means "to earn by working diligently, to earn by working hard" in Ottoman Language - to his company.

The company, particularly focused polypropylene yarn, polyester yarn, ropes and tarpaulin in the early years, extended its range of products with addition of artificial leather in the following years. **KISBU**, making a significant leap in the 10th year, took the first step in the growth process by opening a new branch, where products are stored. **KISBU**, expanded and grown reaping fruits of this branch, decided to open its second sales branch to provide better service to its customer portfolio. Thanks to its second branch opened in 1993, the company started to provide its customers with faster, high quality and more reliable service, and thus got new customers.

**KISBU**, with its gradually growing and expanding branch networks, introduced Nonwoven Spunbond fabric into Turkish market making a big innovation and obtained leading position in the sector. Over the years, the said position is consolidated by means of numerous innovations made.

**KISBU** launched a 4,000 m<sup>2</sup> production facility in Beylikdüzü in 2002, targetting bigger markets with its steadily rising performance.

In 2004, third sales branch is opened in Bursa to develop customer network and increase market share even further. In the following years, **KISBU** continued to maintain its growth in Turkey by opening new sales branches in İstanbul, İzmir and Denizli.

The company, accelerating its investments, established a second production facility in İstanbul, Çatalca -with a production capacity of 12,000 m<sup>2</sup> in 2006- and a third production facility in Denizli in 2009. Additional production areas of 4,000 m<sup>2</sup> and 7,000 m<sup>2</sup> - respectively in 2010 and 2014- are added to the first production facility opened in Beylikdüzü and company headquarters is moved this location. The most recent production facility of the company is in Muratlı, Tekirdağ.

In present time, m<sup>2</sup> continues to increase its product range and production capacity each passing year with its 40.000 m<sup>2</sup> indoor production facilities and modern management approach.

Continuing to expand its sales network both in Turkey and abroad, **KISBU** continues to grow with the Basal brand, which was merged in 2017.

Your solution partner addicted to innovation and technology

Since the early days of our establishment, we strived for the best and the newest all the time, not to repeat ourselves. We did not even paused for one day in our more than 40 years of history off from innovation and the most advanced technology.

Your solution partner  
for all needs

# Our Quality Policy

- To provide quality products and services to our customers based on customer satisfaction
- To follow the company's progress regularly and update our quality policy when necessary
- To ensure that our employees fulfill their responsibilities regarding quality, customer satisfaction, team work and work discipline
- To ensure that the products and services that best suit the needs of our customers are presented hassle - free.

Your solution partner  
with innovative character  
for all needs

We do not neglect to regularly check in KİSBU if our customers' requests for social and technical compliance are met or not. We produce permanent and realistic solutions to reestablish satisfaction in places where there are deficiencies or deviations, and we strive to perfect our production process by creating a regulative action plan accordingly.

## The greenest solution partner

As KİSBU Tekstil, we put sustainability of life cycle at the forefront as well as the development of our own products and services. Therefore, our basic principles regarding environmental protection are to use environmentally friendly products acting in accordance with national and international legislation and to make the most beneficial use of recycling. In all our activities, we strive to protect global resources, minimize the pollution and waste level, and always contribute to sustainability by preserving our environmental standards.

## Spunbond

We combine our years of experience with the latest technology in the production of Spunbond, our technical fabric produced with 100% polypropylene. We comply with Ekoteks and Edana standards in Spunbond fabric production as well as our continuous investments and innovations. Apart from the quality of production, we offer our customers a diversity of sizes by producing our Spunbond fabric in two different forms -namely 240 cm SS and 320 cm SMMS- in order to respond to customer satisfaction in every possible way. Our customers can procure Spunbond fabrics ranging from 10 grams to 160 grams, and produced in desired colors and features.

### **Applicable specifications,**

- UV
- Antistatic
- Hydrophylic
- Hydrophobic
- Fr

### **Applications in our facilities,**

- Coating Lamination
- Hotmelt Lamination
- Printing
- Ultrasonic Quilting

## Using Areas

### Medical

Spunbond fabric is used in the medical sector either SMS and laminated as water repellent and water absorbent.

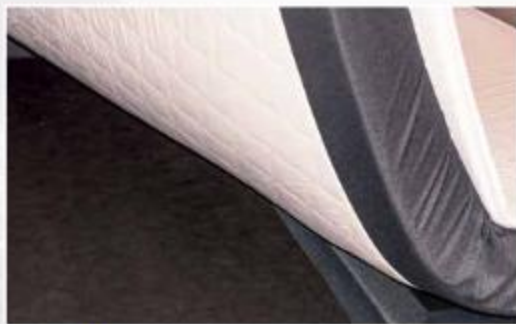

### Isolation

Roof and facade in breathing or non-laminated film moisture barrier and steam is used as a stabiliser.

### Agriculture

It is used for mulching purposes or in seasonal transitions, in unfavorable weather conditions and as a protective product for agricultural products in case of sudden heat changes.

### Beds and furniture

Spunbond fabric is used as inner, lower and side lining in beds and furniture.

### Promotion

It can also be used for promotional bags, clothes cases and so on.

## Spunlace

KİSBU continues its assertiveness, rise and permanence with Spunbond and Shoulder Padding Fibers and now moves up its success even further thanks to a brand new investment and fabric: Spunlace.

KİSBU reveals its difference in the sector once again in 2017 with the Spunlace fabric, of which initial investments were made in 2016. Spunlace is produced in the facilities in Tekirdağ and it is produced in accordance with the production process of new generation facilities and international quality standards.

Spunlace fabric weights between 25 grams to 150 gram in a square meter and can be produced up to a maximum width of 320 cm. It can also be used with natural and synthetic fiber types.

Our fabrics meticulously developed with state-of-the-art technology in the most hygienic conditions targeting perfection, has a structure that can satisfy many requirements such as particle-free property, liquid repellency, liquid absorbency etc.

## Using Areas

### **Medical,**

It is used in bandages since it is particle-free and anti-bacterial product. Patient washcloth fit its purpose thanks to its soft tissue and non-pilling fabric.

### **Hygiene,**

Spunlace can be used in the production of wet wipes with desired softness, absorbency and quality standards. It can provide the softest and most sensitive touch during face-to-face contact in make-up cleaning wipes. As for industrial cleaning, it can be produced in different structures and touch with its stain-free property.

### **Cleaning Wiping**

It is used in cleaning and drying cloths, in various cleaning products and mops.

### **Cosmetics,**

It is also used in hair-setting products due to its high absorbency and non-pilling feature. It is advantageous in terms of hygiene since it is single-use (disposable) product. It is also preferred in wax cloths and facial masks due to soft touch effect.

### **Other,**

Spunlace has many uses such as disposable slippers, sheets, bathrobes in hotel textile. It is also used to provide durability on the back of the product through lamination. Due to its high filtration capacity with fibrous tissue, it acts as an excellent filter in products.

## Using Areas

Medical  
Hygiene

Promotion  
Lamination

Home Textile and Other

## Applied Products

### **Coating Lamination,**

We can develop different products by coating products and gluing together two different products, and thus ensuring liquid tightness and resistance. We offer it in a wide range, in requested colors, in width up to 220 cm and different weights, which would meet the needs of our customers.

### **Hotmelt Lamination,**

We also implement applications that combine two or more products with the "Hotmelt" method. We make rubber and polyurethane based, different width options for our customers through our various machine parks, using different technologies.

### **Ultrasonic Quilting,**

We also have our Ultrasonic Quilting application during which we combine products -containing synthetic or synthetic mixtures by means of ultrasonic welding system. We can offer this application up to 220 cm, in different combinations as requested.

### **Printing,**

A maximum of 4 colors can be printed on desired products in different widths and in desired designs by use of flexographic printing technique.

## Using Areas

### Coating Lamination

Isocover is used as a moisture barrier.

Spunflex is used as medical tablecloth.

### Hotmelt Lamination

Aleze is a wash resistant, protective fabric.

Doubleflex & Threeflex are used as medical, soft touch operation cover.

Adhesive fabric is a one-sided adhesive product

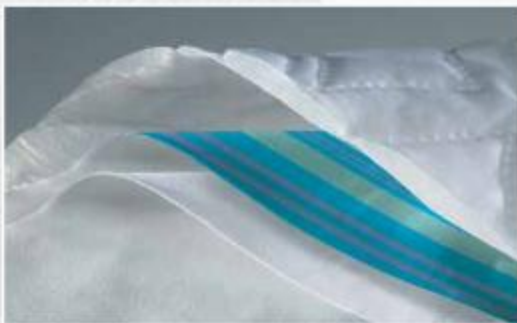

Breathable Isocover; is as a steam equaliser.

### Ultrasonic Quilting

We produce quilted products by applying different patterns to one or more fabrics.

### Printing

We can apply desired patterns on our products.

Being world quality standard producer  
We are selling to all over the world
