Itching

가려움증은
변화에 취약함을 뜻한다.

가려움증은
피부기능(조절력)이 약한
증거이기도 하다.

The pain caused by **skin pruritus** (Itching: unpleasant sensations that cause the urge to scratch or rub the skin) is very uncomfortable.

1. The skin scratches caused by **itching** worsen inflammation and impair the skin.
2. It is very often that many people with **pruritus** may feel itchy at night after dinner or at the time of going to bed.
3. The **pruritus** may cause various skin diseases such as urticaria, eczema, atopic dermatitis, contact dermatitis, nummular eczema, neurodermatitis, psoriasis, dry skin, senile pruritus, mykosis fungoides, etc.
4. **Itching** is a geriatric skin disease and the major causes are deteriorated skin function / structure, allergic and excess of viral toxins.

Pressure Sore

장시간 압박으로 원뿔 모양의 연부 조직 손상이 일어난다.

압박궤양의 손상 양상

Pressure sore is a skin inflammation or skin necrosis. The pressure sore is caused by blood clotting due to blood circulation failure caused by interruption of blood supply to the skin due to body weight, such as posture pressure.

The product should be sprayed on to the spot and wiping off. The prevention and disinfection is very important.

Be sure to Remember! 📌 Itching and Pressure Sore

- 1- Change in skin color
- 2- Blisters and exfoliation can be prevented by using the sterilization and disinfection dressing
- 📌 **Pressure Sore**
- 3- Skin loss pain
- 4- Protect from the exposure of muscles and bones, inflammation and infection
