

Elastic Lab®

Novel Elastin Care Solution 'Elastic Lab'

Elastin and Collagen Care

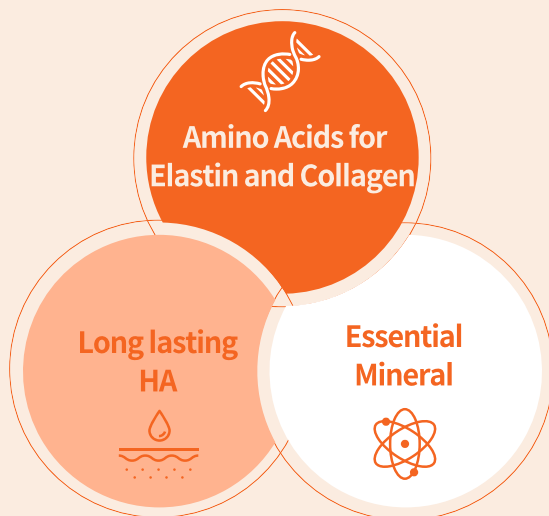

Moisturize and nourish your skin

Supply essential mineral for dermal layer

Elastic Lab for

- ✓ Loss of elasticity
- ✓ Aging skin, fine lines
- ✓ Pore, flushing, skin dryness

Elastin, the secret of skin elasticity

Elastin?

The key protein responsible for the elasticity of the body. Abundant in the skin, blood vessels, and ligaments. Maintain original shape of the Skin

Elastin & Collagen

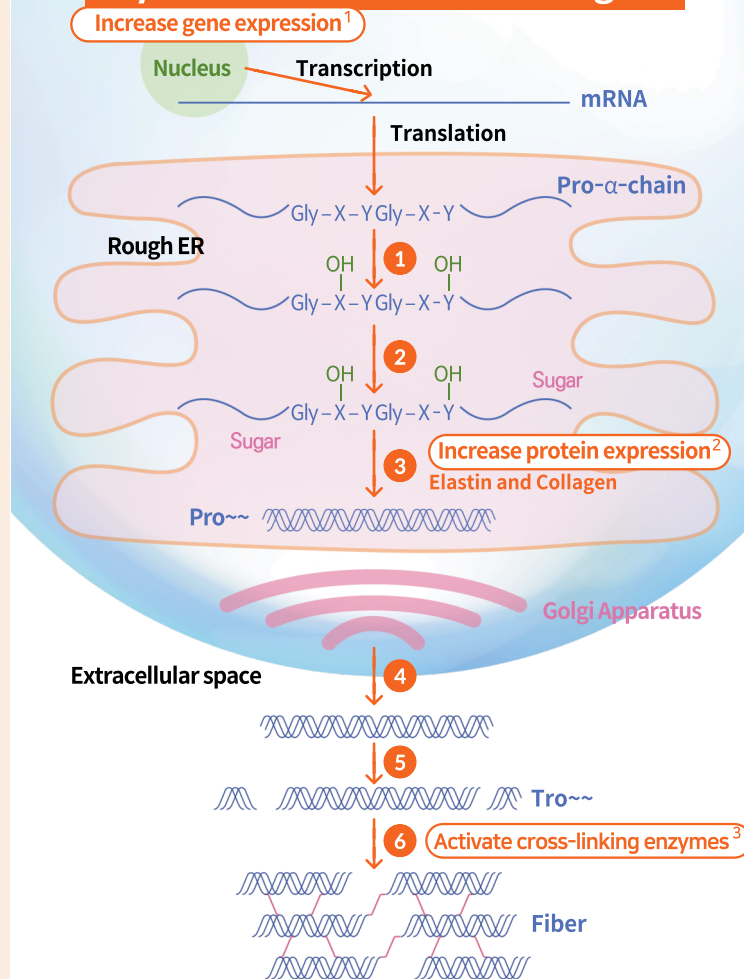

Unlike collagen, elastin has rubber-like elasticity due to unstructured peptide chains.

Elastin provides elasticity to the skin by supporting collagen and restores the original shape even when the tissue is stretched or contracted.

#ElastinCare #ElasticLab

Mode of Action on Synthesis of Elastin and Collagen

- 1 Hydroxylation
- 2 Glycosylation
- 3 Assembly of pro-α-chains into procollagen
- 4 Exocytosis
- 5 Procollagen peptidases cleave C-terminal & N-terminal peptides
- 6 Lysyloxidase cross-links molecules
