

 **kisbu**

About Us

"Sweat blood" is our second name.

We "sweat blood" for quality production.

The journey of **KISBU**, today the most favored brand in many industries ranging from furniture to home textile, from medical to automotive, started about 40 years ago from now.

Nedim **KISBU**, who founded the company in 1978 at Mercan Sales Branch, designated philosophy and future of **KISBU** giving his surname - means "to earn by working diligently, to earn by working hard" in Ottoman Language - to his company.

The company, particularly focused polypropylene yarn, polyester yarn, ropes and tarpaulin in the early years, extended its range of products with addition of artificial leather in the following years. **KISBU**, making a significant leap in the 10th year, took the first step in the growth process by opening a new branch, where products are stored. **KISBU**, expanded and grown reaping fruits of this branch, decided to open its second sales branch to provide better service to its customer portfolio. Thanks to its second branch opened in 1993, the company started to provide its customers with faster, high quality and more reliable service, and thus got new customers.

KISBU, with its gradually growing and expanding branch networks, introduced Nonwoven Spunbond fabric into Turkish market making a big innovation and obtained leading position in the sector. Over the years, the said position is consolidated by means of numerous innovations made.

KISBU launched a 4,000 m2 production facility in Beylikdüzü in 2002, targeting bigger markets with its steadily rising performance.

In 2004, third sales branch is opened in Bursa to develop customer network and increase market share even further. In the following years, **KISBU** continued to maintain its growth in Turkey by opening new sales branches in İstanbul, İzmir and Denizli.

The company, accelerating its investments, established a second production facility in İstanbul, Çatalca -with a production capacity of 12,000 m² in 2006- and a third production facility in Denizli in 2009. Additional production areas of 4,000 m² and 7,000 m² - respectively in 2010 and 2014- are added to the first production facility opened in Beylikdüzü and company headquarters is moved this location. The most recent production facility of the company is in Muratlı, Tekirdağ.

In present time, **KISBU** continues to increase its product range and production capacity each passing year with its 40.000 m² indoor production facilities and modern management approach.

Continuing to expand its sales network both in Turkey and abroad, **KISBU** continues to grow with the Basal brand, which was merged in 2017.

Your solution partner addicted to innovation and technology

Since the early days of our establishment, we strived for the best and the newest all the time, not to repeat ourselves. We did not even paused for one day in our more than 40 years of history off from innovation and the most advanced technology.

Spunbond

We combine our years of experience with the latest technology in the production of Spunbond, our technical fabric produced with 100% polypropylene. We comply with Ekoteks and Edana standards in Spunbond fabric production as well as our continuous investments and innovations. Apart from the quality of production, we offer our customers a diversity of sizes by producing our Spunbond fabric in two different forms -namely 240 cm SS and 320 cm SMMS- in order to respond to customer satisfaction in every possible way. Our customers can procure Spunbond fabrics ranging from 10GSM to 160GSM, and produced in desired colors and features.

Applicable specifications

Ultraviole
Antistatic
Hydrophylic
Hydrophobic
Fr

Applications in our facilities

Coating Lamination
Hotmelt Lamination
Printing
Ultrasonic Quilting

Using Areas

Spunbond fabric is used as inner, lower and side lining in furniture and to produce pocket spring in beds. Spunbond fabric is also used for home textile products, as raw material for pillowcase, quilt, bag and etc.

Fiber

Firstly we started in Denizli fiber production facility in Istanbul at the beginning of 2012, production quality and capacity by adding more forward-ported. Plants are adapted to the latest technology machines and all kinds of established fiber has the capacity to produce maximum quality.

Especially in Istanbul, Turkey staple fiber plant products moved up a step standarts of quality.

Thanks to the quality of our products and service to our customers in the fiber industry rapidly expanding client portfolio.

Types of Fiber

Wadding Fiber

Thermo Fiber

Ironed Fiber

Silicone Fiber

Ball Fiber

Using Areas

Fiber increases comfort and heat insulation in furniture and bed. Usually, finishing fibers are used. It is used between the sponge and the upholstery fabric in furniture and bed production.

Fiber is also used for home textile products, as raw material for pillow, ultrasonic quilting, quilt and etc.

Needle Punch Felt

Needle Punch Felt is nonwoven product what produced with 100% polyester raw material. Usually used in interior furnishing process in furniture production. When used together with leather, it is mostly used for leather upholstery because it adds anti-slip properties to the skin.

It is produced in different thicknesses and different softnesses. Generally, felt is produced at 80g /m², 90g /m², 100g /m², 110g /m², 120g /m², 130g /m², 140g /m², 150g /m² and 160 cm width. In addition, different sizes and colors can be produced according to the order.

Pe&Peva Film

Being produced by cast film technique and having polyethylene content, it gives high strength, liquid impermeability and air tightness in different layers and different techniques even at low weights. Thanks to these features, it can be used in different forms as film and lamination material in many sectors.

Applicable specifications

Ultraviole
Antistatic
Fr

Applications in our facilities

Coating Lamination
Hotmelt Lamination
Printing
Ultrasonic Quilting

Applied Products

Coating Lamination

We can develop different products by coating products and gluing together two different products, and thus ensuring liquid tightness and resistance. We offer it in a wide range, in requested colors, in width up to 220 cm and different weights, which would meet the needs of our customers.

Hotmelt Lamination

We also implement applications that combine two or more products with the "Hotmelt" method. We make rubber and polyurethane based, different width options for our customers through our various machine parks, using different technologies.

Ultrasonic Quilting

We also have our Ultrasonic Quilting application during which we combine products -containing synthetic or synthetic mixtures by means of ultrasonic welding system. We can offer this application up to 220 cm, in different options as requested.

Printing

A maximum of 4 colors can be printed on desired products up to 160 cm width and in desired designs by use of flexographic printing technique.

Using Areas

Ultrasonic Quilting products is used on top of bed base covers, preventing the bed from slipping.

We use Spunbond, Peva, Fibers, Towels, Felt products which we have used in printing or Coating and Hotmelt Laminating applications.

Pe&Peva Film and Applied Products are used for Home Textiles products as raw material for saddlebag, Multipurpose cover, aprons, Packaging, marriage portions, products, bags and etc.

Mattress Protector-Alez Fabric

Cotton is produced by laminating to different towel fabrics in Polyester, optionally with PE or PU Film by hotmelt method. It is liquid-proof thanks to the underlying film, and flexible if it is made of Pu film.

It is not a disposable product. Washability at 90 degree temperature has been tested and approved. In this respect, the product has the feature of being used for a long time.

It is used extensively in the medical and home textile sector, especially in hospitals and hotels.

Available in different colors, different weights and up to 220CM.

Using Areas

Alez Fabric is used as raw material for Mattress protector, pillow protector, baby aprons and etc.
