Bee-Venom micro Filler Patch

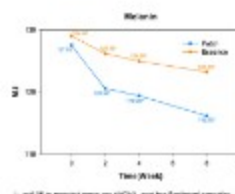

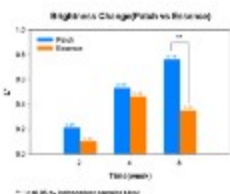

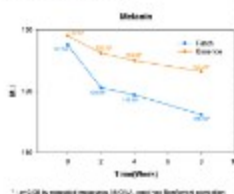

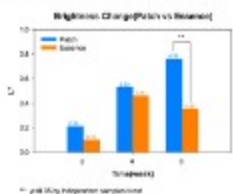

"We guarantee the best change in you"

Quick & Easy skincare

Cosmetics that give tingling pain rather than softly covering the skin? It is a micro needle patch. However, there was a good reason to endure the pain. So what appeared is the micro needle patch. The strategy is to deliver the active ingredients to the skin through pointed microneedles to reduce the absorption step and to directly penetrate into the skin to deliver the active ingredients.

• Bee venom Micro - Filler Patches

Bee venom Micro-Filler patches are instant-fix targeted treatments which provide an immediate visible difference by plumping and smoothing the skin to reduce the appearance of lines and wrinkles. Each patch is made from pure Hyaluronic Acid and Bee Venom and is designed with 750 micro 'stings'. Bee venom Micro-Filler patches provide a similar anti-wrinkle instant result with the hyaluronic acid locking in moisture to provide a plumper, smoother effect and bee venom stimulating collagen to rebuild and restructure the skin over time.

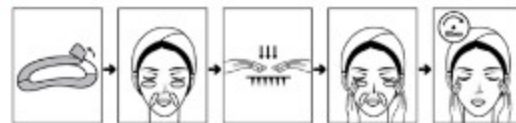

Due to the micro-stings structure please note that you may experience a slight tingling sensation upon initial application.

✓ Suggested applications:

- Smile lines and vertical lip lines
- Crow's-feet
- Under the eye
- Frown lines or forehead creases

✓ How to use

1. Before sleep, cleanse your face and remove water. (Make sure that all cosmetics were absorbed, and then apply patch.)
2. Open the pouch and plastic case carefully.
3. Be careful not to touch the center area with fingers and remove white protective film.
4. Attach patches on the area you want and press vertically with fingers for about 10-20 seconds.
5. Peel softly in next morning (or after 1 hours minimum)

✓ Usage cycle

1. For normal care (In case of weak wrinkles) : once a week.
2. For intensive care (In case of severe wrinkles) : 2 times a week.
