The most advanced player validation system in the world
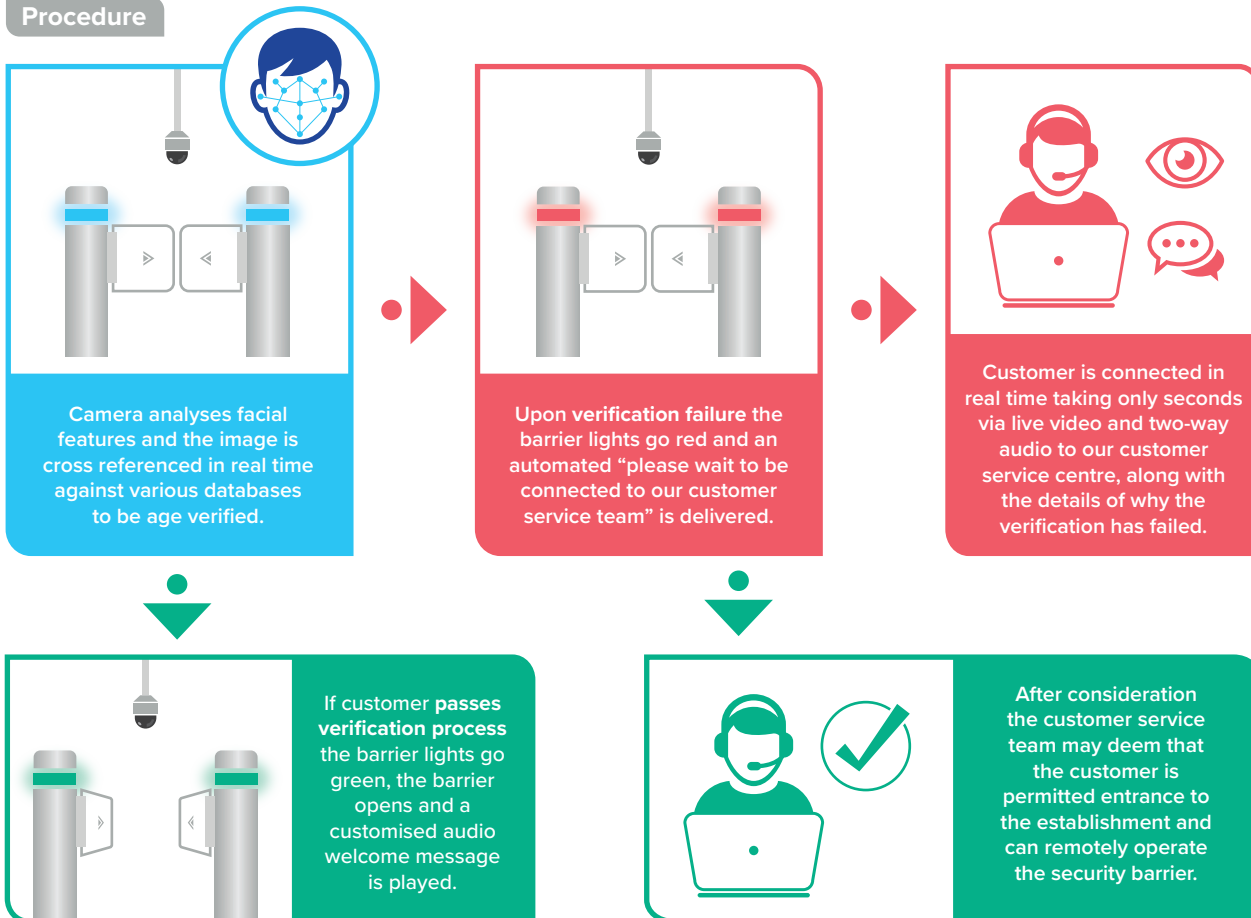

VeriGuard™
Advanced Player Verification System

Environments

Casinos

Licenced Betting Offices

Adult Gaming Centres

Bingo Halls

Family Entertainment Centres

Pubs & Clubs

Verification

Looks under 25 but of legal gambling age, entered into verified database

Self Excluders

Barred Customers

Money Launderers

Known Cheats

Staff

VIP

Procedure

Camera analyses facial features and the image is cross referenced in real time against various databases to be age verified.

Upon **verification failure** the barrier lights go red and an automated "please wait to be connected to our customer service team" is delivered.

Customer is connected in real time taking only seconds via live video and two-way audio to our customer service centre, along with the details of why the verification has failed.

If customer **passes verification process** the barrier lights go green, the barrier opens and a customised audio welcome message is played.

After consideration the customer service team may deem that the customer is permitted entrance to the establishment and can remotely operate the security barrier.

Benefits

Immediate real time access control and player verification

Reduction in player and consumer waiting times

Higher level of failed player detection

Increased consumer protection

Detection of barred customers

Greater level of staff protection and better welfare

Development of face recognition algorithum

Can be fully integrated with other applications
