

DIAGNOSTIC COLLECTION SYSTEM

COLLECTION, TRANSPORT & PRESERVATION SYSTEMS

Noble Biosciences, Inc. is the company of collection, transport and preservation system for the biopsy

Registered to ISO 9001, 13485 & GMP

Products of medical device manufactured by Noble Biosciences include certified class I and class II.

Noble Bio
Clinical Diagnostic Products

- Specimen collection swab as the biopsy procedure kit manufactured by Noble Biosciences, Inc. GMP facilities and ISO13485 guide line has been certified as class II medical device.
- Swab in tube, agar transport medium, universal transport medium and the other transport media with the swab for specimen collection, preservation, transport and diagnostics are certified class II medical device.
- Agar transport medium, and other liquid transport media without the swab are certified as class I medical device.
- The test procedures for quality control are based upon the quality control methods described in CLSI M40-A2 and others.
- Noble Biosciences swab and transport media as the biopsy procedure kit can be used for animal diagnostics. Usually, for animal diagnostics, please use medical devices such as certified swabs and transport media for only animal. (www.swab.co.kr)

Certificate of : KCL-AAB-150002
GMP

Certificate of Class II : 14-2811
medical device : 15-211
: 15-4092

Certificate of : 14 0084SJ
ISO13485

본 제품의 품질 관리는 수집된 미생물과 바이러스 등 임상 검체의 안전한 수송, 보관 및 회수를 위해 국제적으로 인증된 CLSI (Clinical and Laboratory Standards Institute)의 QC guideline, M40-A2 등의 실험 방법을 따르고 있습니다. GMP시설과 ISO 13485, ISO 9001 인증을 바탕으로 생산 되었으며 각 제품은 Korean FDA의 신고 또는 허가 품목입니다.

The test procedures employed for determining bacterial and viral viability performance and recovery of clinical specimens were based upon the quality control methods described in Clinical and Laboratory Standards Institute (CLSI) M40-A2 and others. To optimize manufacturing and sales requirements for medical devices, we have certificates of GMP, ISO 9001, ISO 13485, CLSI membership and Korean FDA.

Noble Biosciences, Inc. is recognized as a member of CLSI.

REST™ SWAB

Bacterial Transport Swab with Liquid Media

- Applicator (stick) : Acetal polymer(POM) with breakpoint
- Swab tip(head) : Nylon
- Packing material (sterilized individual package) : Easy film to open easily
- Lot number and expiry date is marked on each pouch and tube.
- Products are medical devices for the biopsy procedure kit certified as class II by the Korean FDA.
- Certificate number of manufacturing business : 4439
- The biopsy procedure kit certified as class II with certified item number, 14-2811
- Certificate number of item manufacturer : 15-4092
- Certificate number of GMP : KCL-AAB-15002

NB SWAB

[Bacterial Transport Swab with Liquid Media]

LM06B-NS1-N1P NB SWAB with Standard Nylon Swab
(Liquid Modified Ameis Medium(2ml))

REST Swab, liquid transport medium is used to collect specific specimens and clinical specimens such as aerobes, anaerobes and fastidious bacteria, and transport specimens at room temperature or 4 °C without any problem.

REST Swab tube containing transport medium has self-standing type as a conical tube, easy and centrifuge function.

REST Swab has various of swab such as NFS-1, NFS-2, DNA-1, NS-1 and etc. depending on each target specimen.

REST Swab, liquid transport medium can be stored at room temperature for 48 hours except specific bacteria, Neisseria gonorrhoeae and others.

REST Swab The test procedures for quality control are based upon the quality control methods described in CLSI M40-A2 and others.

REST Swab having transport medium is a medical device, biopsy procedure kit certified as class II by Korean FDA.

REST SWAB Test Procedure

Figure 1

Figure 2

Figure 3

Figure 4

- [Figure 1] Peel open the sealed outer pouch pack.
- [Figure 2] Remove one swab from the inner pouch and collect the specimen without bending the swab.
- [Figure 3] Aseptically remove the cap from the tube containing transport medium, and insert the swab into the tube. Break the swab shaft by bending the swab against the tube rim at the scored point. Replace the cap and secure the lid tight.
- [Figure 4] Record the patient's information on the label and transfer the sample tube containing the specimen to laboratory for analysis.

- Specimen collection swab as the biopsy procedure kit manufactured by Noble Biosciences GMP facilities and ISO 13485 guide line has been certified as class II medical device to collect enterobacteria specimens also. It can be used for animal
- It can be stored and stable at room temperature for 48 hours.
- There are various types of swab tip such as standard nylon swab, standard flocked swab, mini tip flocked swab with or without breakpoint. (www.swab.co.kr)

REST™ SWAB

Bacterial Transport Swab with Liquid Media

REST™ NB SWAB Rapid & Easy System Technology

Collection of Specific and Clinical Specimens, Transportation and Preservation

- REST NB Swab containing modified Amies medium for aerobes, anaerobes and fastidious bacteria can collect and transport specimens with optimal viability and condition.
- The test procedures for quality control are based upon the quality control methods described in CLSI M40-A2 and others.
- REST Swab has various types of swab such as NFS-1, NFS-2, NS-1, DNS-1 and etc. depending on each target specimen.
- For the MRSA screening, swab applicator, DNS-1, NS-1, NFS-1, NFS-2 can be used.
- REST NB Swab having transport medium is a medical device, biopsy procedure kit certified as class II by the Korean FDA.

REST™ SWAB TRANSPORT

Rapid & Easy System Technology for genetic collection swab

NB swab PLUS with Bacterial Transport Swab (Liquid Amies Medium)

" From specimen collection to streaking on the agar plate by using NB SWAB PLUS "

NB SWAB PLUS Rapid & Easy System Technology

New strategy for specimen collection, transport and preservation

NB SWAB PLUS(Amies Liquid Medium Transport Tube PLUS) is used to collect, transport and preserve clinical specimens such as aerobic, anaerobic and fastidious bacteria, virus, chlamydia and MRSA. NB swab assembled with tube can be inverted to put specimen into the media after specimen collection, and then specimen is loaded on the agar plate.

NB SWAB PLUS is a medical device.

NB SWAB PLUS Application

- Clinical Specimens [aerobes, anaerobes and fastidious bacteria, mycobacteria, fungi, trichomonas, bordetella pertussis., etc.]
- Traditional bacterial culture, Gram stains, Rapid antigen testing, Molecular assays

NB SWAB PLUS Characteristics of transport medium

- 1 This product is microbial transport medium for the optimal viability of clinical specimens after collection and transportation.
- 2 By using exclusive tube, it is transported in safety and easy to save sample because of assembled type with tube and swab.
- 3 The test procedures for quality control are based upon the quality control methods described in CLSI M40-A2 and others.
- 4 One system from collection of specimen to loading on the agar plate directly

NB SWAB PLUS How to use

- [Fig. 1] Peel open the sealed pouch pack.
- [Fig. 2] Collect specimen by using assembled swab.
- [Fig. 3] Open the cap assembled with swab and put it into the medium.
- [Fig. 4] Close the cap tight and record information on the label. Transfer the tube containing specimen to laboratory for analysis.
- [Fig. 5] Load sample to the agar plate to incubate. Isolate nucleic acid by using commercial kit.

For the enterobacteria diagnosis FECAL SWAB [Bacterial Transport Swabs with Liquid Media]

Fecal Swab

REST™ FECAL SWAB Rapid & Easy System Technology

Collection of Fecal Specimens, Transportation and Preservation

- REST Fecal Swab containing liquid Cary Blair medium for enterobacteria can collect and transport specimens with optimal viability and condition.
- The test procedures for quality control are based upon the quality control methods described in CLSI M40-A2 and others.
- Various types of swab containing liquid medium to collect fecal specimens, transport and preserve can be used depending on each target specimen.
- By rectal swabbing or direct collection from feces, specimens can be collected and transported to the laboratories for analysis.
- REST Fecal Swab having liquid Cary Blair medium is a medical device, biopsy procedure kit certified as class II by the Korean FDA.

For the enterobacteria diagnosis FECAL SWAB [Bacterial Transport Swabs with Liquid Media]

Fecal Swab Plus

** From specimen collection to streaking on the agar plate by using Fecal SWAB PLUS **

To collect Feces

1. Peel open pouch package and collect specimen with assembled swab.
* Grip the tube assembled with swab to collect sample (Fig. 2)
2. Insert the swab head (tip) into the feces and rotate to right and left to collect a little amount of sample coated on the tip.
* Specimen for incubation : Collection amount are based on the sample demand from diagnosis laboratory.
* Specimen for molecular diagnosis (DNA/RNA) : Collect about 0.2- 0.3 g. If too much or less than standard amount, there is difficulty in quantity and quality of DNA/RNA.

Rectal Swabbing

1. Peel open pouch package and collect specimen with assembled swab.
* Grip the tube assembled with swab to collect sample (Fig. 2)
2. Insert the swab head (tip) approximately 2-3cm into the rectal and rotate to right and left.
Please don't apply excessive force to prevent shaft damage.
* Specimen for incubation : Collection amount are based on the sample demand from diagnosis laboratory.
* Specimen for molecular diagnosis (DNA/RNA) : Collect about 0.2- 0.3 g. If too much or less than standard amount, there is difficulty in quantity and quality of DNA/RNA.
3. Open the cap assembled with swab and put it into the medium. (Fig. 3)
4. Close the cap tight and vortex the tube for homogeneous sample.
5. Record all of the information on the label.
6. Transfer the tube containing specimen to laboratory for analysis. If you expect late transportation, store sample tube at 2-8 °C. Please test in 48 hrs if it stored at room temperature.

After collection specimen : Vortexing (Fecal sample)

FECAL SWAB PLUS How to use

- [Fig. 1] Peel open the sealed pouch pack.
[Fig. 2] Collect specimen by using assembled swab.
[Fig. 3] Open the cap assembled with swab and put it into the medium.
[Fig. 4] Close the cap tight and record information on the label. Transfer the tube containing specimen to laboratory for analysis.
[Fig. 5] Load sample to the agar plate to incubate. Isolate nucleic acid by using commercial kit.

Bacterial Transport Swab with Liquid Media

REST™ Selenite SWAB Rapid & Easy System Technology

Enrichment Selenite Broth to isolate *Salmonella*

- REST Selenite Swab containing enrichment selenite broth is used to isolate, transport and preserve *Salmonella* strain.
- The test procedures for quality control are based upon the quality control methods described in CLSI M40-A2 and others.
- There are Various types of swab such as NFS-1, NFS-2M NS-1 depending on each target specimen.
- REST Selenite Swab with liquid media can be stored at room temperature without any problem.
- REST Selenite Swab containing selenite broth is a medical device, biopsy procedure kit certified as class II by the Korean FDA.

REST™ TSBSalt SWAB Rapid & Easy System Technology

Collection of MRSA in enrichment Media, Tryptic Soy Broth with high salt

- REST TSBSalt Swab containing Tryptic Soy Broth medium including 2.5% NaCl.
- It is used to grow and preserve *S.aureus spp.*(MRSA), and used to inoculate agar plate with small amount of specimen in the medium
- The test procedures for quality control are based upon the quality control methods described in CLSI M40-A2 and others.
- There are various types of swab such as NFS-1, NFS-2M NS-1 depending on each target specimen.
- It is a medical device, biopsy procedure kit certified as class II by the Korean FDA.

Bacterial Transport Medium with Agar Gel

Agar Gel Transport Medium

- Applicator (stick) : Acetal Polymer (POM)
- Swab tip (head) : Nylon / Nylon Flocked
- Sterilized individual package : Open easily by using Easy Film
- Lot.No & Expiry date is marked on each pouch and tube
- Agar transport medium is certified class II medical device as biopsy procedure kit
- Certificate number of manufacturing business : 4439
- The biopsy procedure kit certified as class II with item number : 14-2811
- Certificate number of item : 15-4092 / 15-211
- Certificate number of GMP : KCL-AAB-150002

Agar Gel Transport Medium
[AMIES agar gel-no charcoal]

AD2-2-N1P AMIES Agar Gel Transport Swab
[standard double Swab]

- Amies, Stuart and Cary-Blair medium are supplied depends on specimen.
- The test procedures for quality control are based upon the quality control methods described in CLSI M40-A2 and others.
- Biopsy procedure swab containing modified medium for aerobes, anaerobes and fastidious bacteria can collect and transport specimens with optimal viability and condition
- Agar medium containing swab for specimen collection, transport and diagnostic is certified as class II medical device.
- Biopsy procedure kit containing swab as class II medical device is packaged individually.
- There are several kinds of swab tip such as standard nylon swab, standard flocked swab, mini tip flocked swab with / without breakpoint

T-SWAB TRANSPORT™ Clinical Virus Transport Medium (CTM)

Viral Transport for Virus, Chlamydia, Mycoplasma & Ureaplasma

Noble Biosciences Clinical Virus Transport Medium (CTM) is intended for the collection and transport of clinical specimens containing Virus, Chlamydia, Mycoplasma and Ureaplasma from the collection site.

The test procedures for quality control are based upon the quality control methods described in CLSI M40-A2 and others. CTM transport medium is stable for 24 months at room temperature. Specimens in CTM medium are stable for 48 hours at room temperature. This CTM collection and transport system is certified as Biopsy Procedure Kit, Class II with product-license number 15-211 by the Korean FDA.

Application

- All viruses (Influenza A and B, Herpes Simplex, I and II, Cytomegalovirus, Respiratory Syncytial Virus, Echovirus, etc)
- *Chlamydia trachomatis* and *pneumoniae*
- *Mycoplasma hominis* and *pneumoniae*
- *Ureaplasma urealyticum*
- Enzyme Immuno Assays (EIA)

T-SWAB TRANSPORT™ CTM

- 1 CTM medium transport specimens in safety by using self-standing conical tube
- 2 There are various swab applicators for the sample collection
- 3 Specimens in CTM are stable for 48 hours at room temperature
- 4 Glass beads in CTM can discharge specimens from the swab by vortex

Clinical Virus Transport Medium (CTM) [Specimen Collection Procedure]

[Fig.1] Peel open the sealed pouch pack.

[Fig.2] Remove one swab from the pouch and collect the specimen without bending the swab.

[Fig.3] Aseptically remove the cap from the vial and insert the swab into the tube containing medium.
Break the swab shaft by bending the swab.

[Fig.4] Replace the cap and secure the lid tight and record the patient's information on the label.
Transfer the tube containing the specimen to laboratory for analysis.

- Products, biopsy procedure kit certified as class II are manufactured based on the GMP facilities and ISO13845 guide line. These collection swabs are used to analyze virus for human and animal.
- Specimens in CTM medium are stable for 48 hours at room temperature.
- There are various swab types such as general swab, standard flocked swab, mini-tip flocked swab, endo/exo cervical flocked swab depends on collection site.

CTM - Dropper Tube S

CTM - Dropper Tube S for Viral, Chlamydia, Mycoplasma & Ureaplasma

Clinical Virus Transport Medium (CTM) manufactured by Noble Biosciences, Inc.. is intended for the collection and transport of clinical specimens containing Virus, Chlamydia, Mycoplasma and Ureaplasma from the collection site. CTM-dropper tube S designed specifically is used to collect specimens in the field diagnostic test as Point of Care Testing (POCT) directly. Specimens in CTM medium are stable for 48 hours at room temperature. This CTM collection and transport system is certified as Biopsy Procedure Kit, Class II with product-license number 15-211 by the Korean FDA.

CTM - Dropper Tube S Characteristics of Transport Media

- 1 Transport specimens in safety by using exclusive container. It's designed specifically to apply to field diagnostic test as Point of Care Testing(POCT)
- 2 Specimens in CTM medium are stable for 48 hours at room temperature
- 3 Customer can select filter type.
- 4 By using dropper tube, specimens can be discharged easily from the swab.

T-SWAB TRANSPORT™ Human Papilloma Virus Transport Medium

HPV Medium

HPV transport medium is for the collection and transport vaginal swab specimens and used to analysis the Human Papilloma Virus(HPV) and Sexually Transmitted Disease(STD). Modified PBS Buffer or nucleic acid stabilization reagent can be used for the HPV transport medium.

The test procedures for quality control are based upon the quality control methods described in CLSI M40-A2 and others.

This HPV collection and transport system is certified as Biopsy Procedure Kit, class II with product-license number 15-4092 by the Korean FDA.

Application

- HPV(Human Papilloma Virus) Detection
- STD(Sexually Transmitted Disease) Detection

T-SWAB TRANSPORT™ HPV

- 1 HPV medium transport specimens in safety by using self-standing conical tube
- 2 The quality control methods are based upon CLSI M40-A2 guide line.
- 3 There are Endo/Exo swab applicators for the each target speimen.
- 4 Glass beads in HPV can discharge specimens from the swab by vortex
- 5 Nucleic acid stabilization reagent can be used for the long term storage of specimens, 1 week at room temperature.

T-SWAB TRANSPORT™ Nucleic Acid Preservation & Transport Medium

Nucleic Acid Preservation & Transport Medium

Noble Biosciences Nucleic Acid Preservation & Transport Medium is for the specimen collection and preservation of nucleic acid from the target specimen. Glass beads in this medium can discharge specimens from the swab by vortex.

Antimicrobial agents are incorporated to minimize commensal bacterial and fungal contamination. DNA can be stored for 5 months, and RNA for 1 week.

The test procedures for quality control are based upon the quality control methods described in CLSI M40-A2 and others.

Nucleic Acid Preservation & Transport medium is certified as Biopsy Procedure Kit, class II with product-license number 15-4092 by the Korean FDA.

Application

Specimen collection and nucleic acid preservation for the molecular diagnostics.

T-SWAB TRANSPORT™ Nucleic Acid

- 1 Medium transport specimens in safety by using self-standing conical tube
- 2 The quality control methods are based upon CLSI M40-A2 guide line.
- 3 There are various swab applicators for the sample collection.
- 4 Glass beads in this medium can discharge specimens from the swab by vortex
- 5 Nucleic acid of collected specimens is stable for a long term.

Nucleic Acid Preservation & Transport Medium **PLUS**

Nucleic Acid Preservation & Transport Medium **PLUS**

Noble Biosciences Nucleic Acid Preservation & Transport Medium PLUS is for the specimen collection and preservation of nucleic acid at room temperature from target specimen. Glass beads in this medium can discharge specimens from the swab by vortex. Antimicrobial agents are incorporated to minimize commensal bacteria and fungal contamination. Nucleic Acid Transport Medium is a medical device.

NAPT PLUS Application

Specimen collection and nucleic acid preservation for molecular diagnosis.

NAPT PLUS Characteristics of NAPT medium

- 1 By using exclusive tube, it is transported in safety and easy to save sample because of assembled type with tube and swab.
- 2 Storage of nucleic acid from specimens at room temperature.
- 3 The test procedures for quality control are based upon the quality control methods described in CLSI M40-A2 and others.

Nucleic Acid Preservation & Transport Medium **PLUS**

Self-Drying Swab PLUS

Self-Drying System's Swab PLUS for human

Self-drying System's Swab PLUS is equipped with dry-desiccant membrane to prevent contamination of bacteria and fungi. It can preserve DNA of crime scene evidence, buccal epithelial cell and standard specimen for a long time. it is transported in safety and easy to save sample because of assembled type with tube and swab.

Self-Drying System's Swab PLUS is a medical device.

Self-Drying System's Swab PLUS Application

- Long term stability of buccal DNA
- Long term stability of forensic DNA

Self-Drying System's Swab PLUS Characteristics of transport medium

- 1 By using exclusive tube, it is transported in safety and easy to preserve sample for a long time because of assembled type with tube and swab.
- 2 The test procedures for quality control are based upon the quality control methods described in CLSI M40-A2 and others.
- 3 It is very stable with variation of temperature and humidity.
- 4 It can prevent cross contamination because of fast drying capacity.

Self-drying System's Swab PLUS

SDST-7P Self-Drying Swab PLUS : Swab (Standard Flocked Swab : SNFS-2)

N-SWAB TRANSPORT™

Plain Dry Swab in Tube

- Applicator (stick) : Acetal Polymer(POM)
- Swab tip(head) : Nylon / Nylon Flocked
- Package (Sterilized individual pouch) : Open easily by using Easy Film
- Lot number and expiry date is expressed on each pouch and tube.
- This product is the biopsy procedure kit certified as class II with certified item number, 14-2811
- Certificate number of Manufacturer : 4439

[Individual Pouch for the Swab in Tube]

- Biopsy procedure swab for the collection of specimen is a medical device certified as class II by the Korean FDA.
- Agar transport medium containing collection swab and swab in tube for the biopsy procedure kit are certified medical device as class II.
- Each pouch containing swab has been sterilized with individual package.
- There are various types of swab tip such as standard nylon swab, standard flocked swab, mini tip flocked swab with or without breakpoint

N-SWAB TRANSPORT™

Plain Dry Swab in Tube

Ordering Information : These products are medical devices certified as class II by the Korean FDA.

Cat.No	Description	Packaging
ST-5	Plain Dry Swab in Tube with break point standard single nylon Swab [Applicator : POM with break point, Swab Tip : Nylon, Cap Color : Clear]	1,000 / Case
ST-5N	Plain Dry Swab in Tube, without break point standard single nylon Swab [Applicator : POM without break point, Swab Tip : Nylon, Cap Color : Clear]	
ST-6	Plain Dry Swab in Tube with break point standard double nylon Swab [Applicator : POM with break point, Swab Tip : Nylon, Cap Color : Clear]	
ST-6N	Plain Dry Swab in Tube without break point standard double nylon Swab [Applicator : POM without break point, Swab Tip : Nylon, Cap Color : Clear]	
ST-7	Plain Dry Swab in Tube, with break point buccal flocked Swab [Applicator : POM with break point, Swab Tip : Flocked Nylon, Cap Color : Clear]	
ST-7N	Plain Dry Swab in Tube without break point buccal flocked Swab [Applicator : POM without break point, Swab Tip : Flocked Nylon, Cap Color : Clear]	
ST-8	Plain Dry Swab in Tube, with break point nasopharyngeal flocked Swab [Applicator : POM with break point, Swab Tip : Flocked Nylon, Cap Color : Clear]	
ST-8N	Plain Dry Swab in Tube, without break point nasopharyngeal flocked Swab [Applicator : POM without break point, Swab Tip : Flocked Nylon, Cap Color : Clear]	

ST-5 [Standard Single Nylon Swab]

Description :
Plain Dry Single Nylon Swab with Break Point in Transport Tube
(Swab Type : NS-1 + Long Type Tube)

ST-5N [Standard Single Nylon Swab]

Description :
Plain Dry Single Nylon Swab without Break Point in Transport Tube
(Swab Type : NS-2 + Long Type Tube)

ST-7 [Buccal Flocked Swab]

Description :
Plain Dry Flocked Nylon Swab with Break Point in Transport Tube
(Swab Type : NFS-2 + Long Type Tube)

ST-7N [Buccal Flocked Swab]

Description :
Plain Dry Flocked Nylon Swab without Break Point in Transport Tube
(Swab Type : NFS-5 + Long Type Tube)

ST-6 [Standard Single Nylon Swab]

Description :
Plain Dry Single Nylon Swab with Break Point in Transport Tube
(Swab Type : NS-2 + Long Type Tube)

ST-6N [Standard Double Nylon Swab]

Description :
Plain Dry Double Nylon Swab without Break Point in Transport Tube
(Swab Type : DNS-2 + Long Type Tube)

ST-8 [Nasopharyngeal Flocked Swab]

Description :
Plain Dry Flocked Nylon Swab with Break Point in Transport Tube
(Swab Type : NFS-1 + Long Type Tube)

ST-8N [Nasopharyngeal Flocked Swab]

Description :
Plain Dry Flocked Nylon Swab without Break Point in Transport Tube
(Swab Type : NFS-4 + Long Type Tube)

NFS-SWAB APPLICATOR™

Diagnostic & Genetic Swab

Specimen collection swab as biopsy procedure kit is a medical device, class II certified by the Korean FDA. Raw materials of Diagnostic & Genetic Swab manufactured by Noble Biosciences are medical grade POM for applicator, nylon for swab tip(head), easy film for swab pouch.

Ordering Information : These products are medical devices certified as class II by the Korean FDA.

Flocked Swab Applicator

Cat.No	Description	* Breakpoint Distance	Packaging
NFS-1 NFS-4	Flocked Mini Tip Swab Applicator [Nasopharyngeal Flocked Swab] Full length of applicator : 150 mm 	90 mm not breakable	500 / Case
NFS-2 NFS-5	Flocked Regular Swab Applicator [Standard Flocked Swab] Full length of applicator : 150 mm 	30 mm, 90 mm not breakable	500 / Case
NFS-3	Double Flocked Swab Applicator [NFS-1+NFS-2] with breakpoint 	90 mm 30 mm, 90 mm	500 / Case
NFS-6	Double Flocked Swab Applicator [NFS-4+NFS-5] without breakpoint 	not breakable	500 / Case
NFS-24	Double Flocked Swab Applicator [NFS-4+NFS-2] 	not breakable 30 mm, 90 mm	500 / Case
NFS-7	EndoCervical Flocked Swab Applicator with breakpoint Full length of applicator : 190 mm 	80 mm	500 / Case
NFS-8	ExoCervical Flocked Swab Applicator with breakpoint Full length of applicator : 190 mm 	80 mm	500 / Case
NFS-10	Urethral Flocked Swab Applicator with breakpoint Full length of applicator : 150 mm 	90 mm	500 / Case
SNFS-2	Short Standard head Flocked Swab Applicator with breakpoint Full length of applicator : 90 mm 	30 mm	500 / Case

※ The length of breakpoint distance is from end of the swab tip to breakpoint.

NFS-SWAB APPLICATOR™

Diagnostic & Genetic Swab

Ordering Information : These products are medical devices certified as class II by the Korean FDA.

Standard Swab Applicator

Cat.No	Description	※ Breakpoint Distance	Packaging
NS-1	Standard Swab Applicator [Traditional Standard Swab] with breakpoint Full length of applicator : 144 mm 	90mm	500 / Case
NS-2	Standard Swab Applicator [Traditional Standard Swab] without breakpoint Full length of applicator : 144 mm 	not breakable	500 / Case
NS-3	Standard Swab Applicator [Traditional Standard Swab] with breakpoint Full length of applicator : 144 mm 	30mm	500 / Case
DNS-1	Standard Double Swab Applicator [2pcs] with breakpoint Full length of applicator : 144 mm 	90mm	500 / Case
DNS-2	Standard Double Swab Applicator [2pcs] without breakpoint Full length of applicator : 144 mm 	not breakable	500 / Case
BNS-1	Big head Swab Applicator with breakpoint Full length of applicator : 144 mm 	90mm	500 / Case

Brush Type Swab Applicator

Cat.No	Description	※ Breakpoint Distance	Packaging
CB-1	Cervical Brush Swab Applicator Full length of applicator : 180 mm 	90mm	500 / Case
CB-2	Cervical Brush Swab Applicator Full length of applicator : 180 mm 	90mm	500 / Case
CB-3	Cervical Brush Swab Applicator (Collection & Cleaning Swab) 	90mm	500 / Case
CB-4	Cervical Brush Swab Applicator (Collection & Cleaning Swab) 	90mm	500 / Case

Environmental Swab

ETS Environmental Monitoring Swab

REST™ ETS Environmental KIT (Surface Inspection Kit)

- 1 By using assembled swab with cap and exclusive tube, it is easy and fast.
- 2 This product is for surface inspection of many kinds of instruments, device, human body and etc.
- 3 Various solution and volume of saline, BPW, Lethen Broth, NRS, Bufferfield solution, Dey/Engley Neutralising Broth.
- 4 Multiple swab applicators based on your target specimens.
- 5 Used for environmental monitoring of food, cosmetic, pharmaceutical and other facility.

REST™ ETS Swab How to use

- [Fig.1] Open the cap and push the swab head to the surface of inside wall to remove extra solution in the swab head.
- [Fig.2] Collect specimen by using 10x10 cm or 4x5 cm sample template
Sample operator needs training to obtain specimen to test.
- [Fig.3,4] After appropriate sample collection, put the swab into the tube and close the cap tight.
- [Fig.5] Transfer the tube containing specimen to laboratory for analysis as soon as possible. Transport sample tube in 24 hrs at room temperature and store nutrient Solution (Peptone, Lethen) at 4°C.

REST™ ETS Swab [Swab Applicator Type]

1. Standard Nylon Swab : General, Standard Swab Kit
2. Big head Nylon Swab : Larger head than standard (bigger surface)
3. Standard Flocked Swab : General, Standard Flocked Swab Kit
4. Mini tip Flocked Swab : Mini tip size and flexible stick

Environmental Swab

ETS Environmental Monitoring Swab

REST™ ETS Environmental Swab Media & Swab Applicator Type

1. Media Selection : Saline 0.85%, Buffered Peptone Water, Lethen Broth, Butterfield's Solution, Neutralising Rinse Solution, Dey/Engley Neutralising Broth
2. Media Volume : 1 ml, 5 ml, 10 ml and customer ordered
3. Swab Applicator : Standard Nylon Swab, Big head Nylon Swab, Standard Flocked Swab, Mini tip Flocked Swab

Pipette Tips (Sterile Tip System)

Recycling & Economy System Technology

Sterile Tip System [Pipette Tips]

- 1 This product can be used with sterilization and economic price.
- 2 By case recovery for tips from customers, it's recyclable and environmental friendly with lower price when purchasing next tips.
- 3 Raw material is PP resin for Gamma-Irradiation to minimize yellowing and denaturation.
- 4 Pipette Tips are composed of outer and inner rack, and well-sealed inner rack has been supplied after Gamma-Irradiation.

Racked White Tip

Racked Yellow Tip

Racked Blue Tip

Sterile Tip System How to use

STEP 1

Peel open sealed inner rack

STEP 2

Put inner rack into the lower base rack

STEP 3

Cover with the upper base rack

STEP 4

push the upper base rack

STEP 5

Open the upper base rack and use tips

* Starter Racked Tip is composed of 100 Rack/Case, 96 Tips/Rack and supply 10 ea X base rack (outer rack)

Dropper Tube S

Dropper Tube S for Multi-purpose

Noble Biosciences' dropper tubes are excellent at dispensing one uniform drop at a time. our high quality dropper tubes are made of low density polyethylene(LDPE) and the dropping cap having breakpoint and solid cap are made of polypropylene(PP) with excellent chemical resistance. The dropper tubes are available in black or white for light sensitive samples or natural to allow seeing the filling height. The dropping and solid caps are available in clear, yellow, blue, red and violet color. Filters can be included in the dropping caps to eliminate suspended solids.

Dropper Tube S

- 1 This product can be used for field diagnostic test as the Point of Care Tesing (POCT)
- 2 Application area is for rapid influenza, Noro/Rota virus and FOB (Fecal Occult Blood) test.
- 3 Customer can choose filter type of dropping cap out of narrow filter (2.5x2mm), wide filter (7x1.6mm) / (select pore size 30um, 70um, 110um)
- 4 There are sterile and non-sterile tubes in bulk production. To minimize denature and yellow color phenomenon by the gamma irradiation, PP resin for tube caps has been used.

Customer ordered prodction service by using automatic injection and capping system followed by buffer leak test, packing, sterilization by gamma irradiation and microoganism testing.
