

# Elursa 2012 S.L.

Experts in precision machining.

# About us

## Who we are

- 01 We are specialists in the manufacture of tools and dies for hot and cold forging, in specific applications of forming or forging for automatic machines HATEBUR | SACMA | NATIONAL among others.

## What do we do

- 02 We make unitary parts and small series for specific projects and different sectors of activity: automotive, aeronautics, machine tools, railways, food, etc.

## Our installations

- 03 We have Mazak Turning Centers with 5 directional axes, assisted by CAD-CAM programming, to machine with maximum precision different complex shapes in a single assembly, providing greater productivity and reducing costs and lead times.

# Our solutions

We offer **integral solutions** to our clients covering different phases in the development of a machined part from a drawing: tooling, tooling, spare parts, etc.

| 01 .....                                                                 | 02 .....                                                                                                                                                  | 03 .....                                                                                                                                      | 04 .....                                                                                |
|--------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|
| Product                                                                  | Type of part                                                                                                                                              | Materials                                                                                                                                     | Manufacturing and delivery times                                                        |
| Manufacture of <b>tooling, tools and tools</b> for hot and cold forging. | We work all types of pieces, <b>simple and complex</b> , in unitary pieces and in short series up to 100 units, with a piece diameter between 1 - 300 mm. | We work <b>with special steels</b> , sintered, tempered, stainless, and also aluminum, bronze, Kevlar or other materials and composites, etc. | We manufacture and deliver the order to the customer in approximately 15 business days. |

# Typology of pieces

# ¿We collaborate together?

Send us your proposal and we will work on it!

Telleria Kalea nº 11, Polígono Altos Hornos. 20570 Bergara (GIPUZKOA).
