DAMAGING STRANDS

THOSE WHO ARE
LOOKING FOR
EASIER AND
MORE CONVENIENT
HAIR DYEING

What makes Candy Speed different from other hair color products?

Unique features of Candy Speed

Safety

- The formula **reduces hair damage** by minimizing the processing time that the hair dyeing agent remains to contact with strands while **having lower pH level** than other hair dye products in the market.
- This ammonia-free hair color has **no pungent smell**. Blended with natural plant extracts such as Aloe Vera Leaf Juice, it feels mild, soft, and gentle.
- With a perfect combination of multiple ingredients effective for irritation relief, this product **minimizes allergic reactions**.

Rapid effect

- The technology that is based on our patent (hair dyeing agent formulation, No. 10-0633439) enables dye to be quickly penetrated the inner layer of the hair cuticle and allows even hair dye application and coverage. **Within one or two minutes after spreading on the entire hair, you will have a beautiful natural hair hue from root to tip.**

Long lasting

- This product will leave your hair shimmery and radiant after dyeing, without making it easily fade or discolor.

Treatment

- This product is formulated with **polymers, essential oils, and plant extracts** to condition hair during and after the dye job, leaving your hair shinier and softer.

Convenience

- Blend hair dyeing agent and developer with 1:1 ratio of mixture. Then brush it through your hair.

The moment it touches your hair,
you will feel its mildness and softness

Candy Speed Hair Dye

blended with natural extracts

Purified Mildness Advantages

This product contains natural plant extracts such as Aloe Vera gel, leaving your hair mild, soft, and radiant. It is in the pursuit of Purified mildness advantages, a campaign for milder functional beauty products. It boasts a blend of natural ingredients that will completely change the stereotype that consumers used to have about hair color products being full of hazardous chemicals.

Why do we need to choose Candy Speed? Candy Speed's **unique features**

VS

Other hair dyes

It smells bad and makes the eyes sting.
Its color quickly fades.

It takes too long to do the dye job.
Inconvenient.

Hair dye products often damage hair strands. Is there any solution?

Hair dye products make hair rough, coarse, and fragile.

Candy Speed

Candy Speed is **ammonia-free hair dye** containing natural extracts. So, it does not irritate the eyes, but the hue lasts long.

Just 1 - 2 minutes are enough for Candy Speed to work its magic. Our patent enables the hair dye formulated with a hair penetration booster to evenly cover your hair in a very short time.

The processing time is very short.
No worries about damaging your hair strands and skin/scalp irritation.

Candy Speed enabled by technological prowess protecting both skin/scalp and strands will make your hair silky smooth as soon as you shampoo after the dye job.

Candy Speed offers multiple colors for various styling and coloring.

Candy Speed **Colors**

One minute is all it takes for you to switch up your hair color!
(choose your favorite hair color for your style)

This ammonia-free hair color blended with natural plant extracts will give your hair mildness, softness, and radiance the moment it touches your hair.

How to use

Blend hair dyeing agent and developer with 1:1 ratio of mixture. Then brush it through your hair.

Want to know more about Candy Speed Hair Color? Here are frequently asked Q & A

Q How does this product color hair in just one minute?

A Spread hair dye on your entire hair and leave it for one minute. One minute is enough, indeed. Formulated with Candy Speed's patented technology called <hair penetration booster>, the hair dye quickly yet deeply, evenly reaches deep into the cuticle layer, which helps you get more beautiful hue for a longer period.

Q Are there any side effects like stains on the skin?

A Because Candy Speed Hair Color does not require long processing time, you get to shampoo shortly after. So, stains are easily removed from the skin. Plus, Candy Speed is made with special natural ingredients that prevent skin damage, which causes no irritation or damage compared to other hair dye products in the market.

Q Is there any extra step needed when using Candy Speed?

A No. All you need to do is spread the dye evenly on your hair starting from grays or side hair. Candy Speed is the non-drip formula with a perfect viscosity, which makes it easier for you to hair color at home.

Q How about hair and strand damage?

A The major cause of hair damage is that a chemical reaction takes place when the hair dye stays longer on hair and dries out. Therefore, short, intensive hair color products will less likely to damage your hair. Plus, Candy Speed is formulated with our patented hair protective agent (a special formulation containing Aloe Vera Gel, Ceramide, and Human hair keratin) to minimize hair/strand damage.

Q What happens if I don't leave hair dye on my hair long enough (less than one minute) or leave it too long?

A The same mechanism applies to Candy Speed as other regular hair dye products. If you leave the dye in your hair less than one minute, you will get lighter hue and the hue will not last long. If you leave the dye more than one minute, you will get darker hue, but after a certain time (3 – 4 minutes), the dye no longer works, which your color develops equally.
