

The worlds first total IP security system in a box

The innovative FogGuard™ system from Innovative Security Products Limited incorporates the very latest security technology and offers:

- Fully integrated IP security via wireless intruder detection
- Real time remote monitoring and management via HD CCTV
- Expert conflict management via crystal clear two-way IP audio communication
- The world's fastest high density security fogging system

Advanced wireless
detection

Expert conflict
management

Real-time
monitoring

Rapid security
fogging

FogGuard™ is the first system of its kind in the world and offers many unique features:

- Rapid deployment
- Fully installed and integrated options available
- Full IP connectivity
- Built-in wireless alarm management system
- Built-in two-way crystal-clear IP audio using VOIP technology
- Built-in HD video via 2MP digital video camera
- Rapid heater start-up time for the fastest and highest density security fogging
- Battery back-up
- Attractive white GRP cabinet
- IP monitored solution via SNMP monitoring tool
- Compact 390mm (H) x 300mm (W) x 130mm (D)
- Vertical and horizontal mounting options
- GPS Asset Tracking (Optional)

Advanced wireless detection and remote alarm management

The FogGuard™ controller houses a multi-functional hybrid wired/wireless remote alarm management system. This has **GSM** and **GPRS** communication paths for swift off-site alarm management and the ability to generate open/closed reporting.

Expert Conflict Management

The controller enables **real-time** two-way IP audio and IP video connectivity direct to our Conflict Management Centre, incorporating **crystal clear audio** and **2MP HD video**.

Rapid Security Fogging

The FogGuard™ controller houses a fully integrated **state-of-the-art** security fogging device. This is the **fastest** fog generation and delivery system available and delivers **200m³** of the densest fog in **under 28 seconds**.

How FogGuard™ works on site

FogGuard™ works by reacting to an alarm activation or personal attack alarm which sends a signal to the FogGuard™ controller. This then starts video and audio transmissions simultaneously to our Conflict Management Centre where the video image is captured in real time.

Our highly trained Conflict Managers will then watch and listen to the security incident as it takes place. No matter the situation, our conflict team will de-escalate the incident or contact the police, fire or ambulance services as required.

In the unlikely event that fog does need to be used, our team will inform the intruders or staff that security fog will be deployed and remotely activate the machine. This will drive any criminals from the site and take away their ability to commit further crime. Our Conflict Managers will continue to monitor the situation remotely through the audio system.
